

Pages to build & shared components

Extracted directly from the Qubryx One Blueprint — every page/screen that needs to be created, and every reusable component identified across them.

01

Complete page list

36 distinct screens across three personas, a pre-auth gate, and a set of cross-persona overlays. Persona access is enforced by a role → lens whitelist (`availableLenses`), previewable live from Settings — in the original this gating is explicitly "UX only"; a real deployment must enforce it server-side too.

Pre-authentication

Login

`/login`

Public

The app's only unauthenticated screen — a fully mocked gate (no real credential check on any path).

- Two-pane layout: left is a 55%-width, auto-advancing (5.2s) 4-slide product showcase (orbit diagram → Q copilot chat mock → Canvas dashboard mock → team presence mock), each with a click-to-jump progress segment; pauses on hover.
- Right pane: work-email + password fields (pre-filled with demo credentials), show/hide password toggle, "keep me signed in", a "Continue with SSO" button, and an "Explore the demo workspace" card — **all three submit paths log in identically**, none validate anything.
- Footer trust row (SOC 2 / MFA copy). Rendered entirely outside the global store — no data is available until login succeeds.
- Persona/role is deliberately *not* chosen here — that happens later, in Settings → Role & access.

Home • Signal view

/app/employee

Employee

Default landing screen — an ambient three-zone overview of the employee's day.

- **The Now** (left) — live, persona-filtered feed of AI-surfaced signals/nudges, filterable by kind.
- **Life Sphere hub** (center) — a central "You" disc (gradient ring = live work-progress arc) ringed by six domain nodes: Calendar, Leave, Pay, Documents, Growth, Requests. Dragging two nodes onto each other resolves a sphere-combo (e.g. Calendar+Leave → best-days-to-take-leave). Tapping the hub asks Q to summarise the day.
- **Today rail** (right) — greeting, live attendance clock, a proactive "Q suggests" card, an onboarding checklist (while incomplete), a kudos/recognition widget, a weekly 1–5 pulse survey, "pending for you" to-dos, quick actions (apply leave / payslip / documents / ask Q), week-ahead agenda, and team presence.

Home • Board view

/app/employee (homeView=board)

Employee

A personal, free-form pinboard swapped in for Signal via a bottom-left mode switch (or the **b** key).

- Dotted free canvas; Now feed, Today rail and the orbit hub are all hidden while in this mode.
- Quick-add palette scoped to employee: My hours / My leave / My goals / My pay, plus tools shared by teammates.
- Per-lens scoped — a Board built here never bleeds into Manager's or HR's Board.

Home • Workspace view

/app/employee (homeView=workspace)

Employee

An infinite, pannable Miro/FigJam-style canvas — the third of the three interchangeable home modes.

- Free-position notes, checklist-style to-dos (with deadlines/timers/subtasks) and bulleted lists.
- Cards can be connected with labeled arrows; connected clusters auto-group into "FlowBoards".
- Any list/todo can be "turned into a Canvas tool" (manager/HR only) or dragged to Q for analysis.

Calendar

</app/employee/calendar>

Employee

The org/personal calendar and the self-service leave-application surface.

- Two view modes: a **ribbon** (stacked monthly SVG sine-wave day-tracks, attendance/events plotted as coloured dots) and a conventional 7-column **detail grid**.
- 5-part leave composer: leave type → duration (full/half/range) → date(s) → reason (240-char, required) → conditional medical-document upload (sick leave > 2 days).
- Business rules live in the UI: casual leave > 2 days auto-converts to earned leave; restricted holidays draw from a searchable, quota-capped list instead of a date picker.
- Context side panel toggles between "this month's events" and "my leave this year".

Documents & Assets

</app/employee/documents>

Employee

Read company policies/announcements, acknowledge required ones, and view allocated IT assets.

- Search + category chips (Handbook / Policy / Benefits / Compliance / Assets).
- "Shared with you" strip — org/team/person-scoped announcements and goals, separate from the formal document list.
- Document grid of three-layer cards (face → expand → peel-for-deep, see Section 2's Token Card).
- Assets tab/section: allocated hardware with serials, condition, and a downloadable register.

Payroll (self-service)

</app/employee/payroll>

Employee

Personal pay area — two independent sections.

- **Payslip Library** — list of past slips, amounts masked by default, one-click download (client-generated statement).
- **Reimbursements** — claim form (title, category, amount, required receipt attach) plus a status-tracked claim history (draft/submitted/approved/paid/rejected).

Growth

/app/employee/growth

Employee

Personal career and performance hub, with a Journey sub-tab for career history.

- Q's self-review summary: strengths / blind spots / a "perception gap" callout.
- Live goals with a $\pm 10\%$ progress stepper and a "cascaded from your manager" note where relevant.
- Next 1:1 card — shared agenda, a checkable action-item list, add-item input.
- Review-cycle card — self-review textarea → submit → read manager feedback once given.
- **Journey tab** — vertical timeline of join / milestone / transfer / promotion / comp-change / kudos events.

Manager

lens = manager · "My Team"

Home (Signal / Board / Workspace)

/app/manager

Manager

Same three interchangeable home modes as Employee; the Today rail content is manager-specific.

- Today rail: pinned Canvas (Vibe Studio) apps, an approvals summary with SLA-breach warning, team presence chips, a flight-risk "attention" card with a one-click retention simulation, a clickable coverage heat-strip, and a 3-stat team-pulse card.

Team

/app/manager/team

Manager

Direct-report roster.

- Auto-switches between a radial "constellation" orbit layout (small teams) and a searchable grid Roster (past ~8 reports) — manual Graph/Roster toggle available regardless.
- Roster: search + department filter, status-summary pills (in / on leave / at risk), click a card to open Q's explanation, hover to pin to Board.

Approvals

</app/manager/approvals>

Manager

Leave-approval inbox — the single busiest manager screen.

- Batch select-all + approve/decline; a separate "On hold" park-for-later section; delegate-while-away with an "auto-approve in policy" toggle.

Insights / Analytics

</app/manager/analytics>

Manager

Team-level analytics and trend reasoning.

- Talent 2×2 grid (performance × potential), a team time-off heatmap, a "Q recommends" agentic card, and free-text change/trend queries ("what changed this week?").

Growth (team)

</app/manager/growth>

Manager

Team-wide counterpart to the employee Growth page — three tabs.

- **Goals** — create a team goal, cascade it to reports (creates child goals), roll-up progress bar.
- **1:1s** — every direct report's 1:1, same agenda + action-item mechanic as the employee view.
- **Reviews** — cycle progress ("N/total self-reviews in"), bulk-nudge outstanding, leave feedback to complete a review.

Documents (team)

</app/manager/documents>

Manager

Authoring surface — the write-side counterpart to the employee Documents page.

- Editor: title, body, type chip (Handbook/Policy/Benefits/Compliance), audience chip (whole org [HR-only] / my team / a person), require-acknowledgment checkbox.
- List of authored docs with status badges (draft/published/archived) and edit / publish / nudge-pending / archive actions — archiving never deletes.
- Activity log of the last 6 authoring actions.

Planning

</app/manager/planning>

Manager

Compensation and coverage planning, tabbed.

- **Compensation** — merit-budget meter, a per-report band-range visual with a stepped raise control, "Route to HR" (draft only, never applies directly).
- **Coverage** — one card per upcoming leave window, a "covered by" dropdown, and a one-click "Q suggests {name}" accept.

Focus

</app/manager/focus>

Manager

A full-screen, priority-sorted action queue synthesized from every open task across the app — "an extension of The Now".

- Aggregates: SLA-breached and pending approvals, flight-risk people (with a full AI rationale), uncovered coverage windows, outstanding self-reviews, unallocated merit budget, plus live cues.
- Cards are swipe-right-to-dismiss; every card carries a primary action, a secondary action, and an "Ask Q" fallback.

HR / Admin lens = hr · "The Org"

Home (Signal / Board / Workspace)

</app/hr>

HR

Same three home modes; Today rail is HR-specific.

- Today rail: current payroll-run status, onboarding pipeline preview, a policy-acknowledgment compliance percentage, and an org-health signal card (attendance anomalies, pending exits).

Org / People

</app/hr/people>

HR

Company-wide directory.

- Multi-root hierarchical "galaxy" tree (leaf reports stack into compact columns, branch managers recurse as their own sub-blocks, curved parent→child links) — falls back to a plain grid if it can't fit without overlap.
- Roster grid toggle available; "Add a person to the org" overlay reachable from here.

Payroll — Pay Run Command Center

</app/hr/payroll>**HR**

Manage the current, org-wide payroll run.

- 4-stage tracker: Calculated → Anomaly review → Approval → Release (locked at "Anomaly review" while any anomaly is open).
- Masked running total with an eye-icon reveal toggle; anomaly queue with per-case "approve correction & release".
- **Register** tab (every payslip) and **Reconcile** tab (month-over-month deltas, each with a named reason, plus a new-joiner sub-list).
- CSV export of the register (masks amounts if pay visibility is off).

Onboarding

</app/hr/onboarding>**HR**

Manage incoming joiners.

- Per-candidate checklist card (8-item day-one template, owner-tagged: IT / People / Manager / Joiner), buddy assignment, live progress %.

Offboarding / Exits

</app/hr/exit>**HR**

Manage departures — the exit mirror of Onboarding.

- "Start offboarding" form: person, reason (resigned / contract end / retirement / involuntary), last day.
- 8-step per-leaver checklist; **access-revoke is hard-locked** until knowledge-transfer and asset-return are both complete (regex-matched business rule on the task labels).

Policies (org documents)

</app/hr/documents>**HR**

Same authoring component as Manager Documents, running with HR privileges.

- Adds the "whole org" audience option and a bulk "nudge all non-acknowledgers" action.

Time & Holidays

</app/hr/timeadmin>

HR

Org-wide leave-policy administration.

- Leave-type list with a ± 1 -day allotment stepper per type, plus a "define a new leave type" mini-form.
- Holiday calendar CRUD (national / company / restricted), each with a delete action; "announce changes" broadcast button.

Planning (HR)

</app/hr/planning>

HR

Same component as Manager's Planning; HR sees an "Approve plan" action once a plan is submitted, rather than the raise-editing controls.

Insights / Analytics

</app/hr/analytics>

HR

Org-wide analytics, mirroring the manager Insights page at company scale.

Focus

</app/hr/focus>

HR

HR-flavored priority queue: pooled/anomalous payslips, a submitted comp plan awaiting approval, onboarding candidates near-complete with no buddy assigned, and org-wide flight-risk people.

Cross-persona overlays & alternate renders

These aren't routed pages — they layer on top of whatever region is active, via `overlay`, `docView`, `vibeOpen`, `sim`, `showTour`, `showLegend` or `plain` state — but each functions as a full screen and needs the same design attention as a page.

Settings

Overlay

All personas

- Wallpaper picker, avatar picker, **Role & access** (live-swaps between Employee/Manager/HR — this is the only place persona access is actually granted), Light-appearance / Sound / Ambient-motion / Plain-mode toggles, "Replay product tour", "Clear Q's memory".

Team Availability Matrix

Overlay

Manager / HR

- Read-only 14-day × teammate grid — in-office / remote / on-leave / weekend cell states, plus a per-day "available headcount" row that flags a coverage dip.

Add Person • Add Leave Type • Add Leave (for someone)

3 overlays

HR / Manager

- Small single-purpose creation forms — new org member, new leave type + allotment, and a 2-step "pick person → pick type/dates" leave-on-behalf-of wizard.

Document Viewer

Global modal

All personas

- Full-text reader for any single document, triggered from anywhere by setting one global id (`docView`) — not a per-card modal instance. Acknowledge action lives here too.

Canvas (Vibe Studio)

Full-screen overlay

Manager / HR

A chat-driven, no-code BI/dashboard builder generating small analytics widgets from the team's seeded data.

- 3 columns: canvas history + built-app icon strip (left) → chat thread with embedded generated app cards (center) → one-click templates, bundled "recipes", and freeform widget primitives (right).
- Per-app actions: rename, duplicate, export CSV/PNG, multi-turn refine ("now filter to just Design"), combine several into one dashboard, and "send to" Now / Workspace / Insights / Board / a named teammate or the whole org.
- Voice dictation and drag-drop file import (pattern-matches the filename to a template) are both wired in.

Retention Simulator

Modal

Manager / HR

- Before/after risk gauge for a chosen person and lever (bonus / high-visibility project / promotion) — swap levers live to compare, then "draft this move for approval".

Gesture Legend

Modal

All personas

- On-demand cheat-sheet of the app's 9 named gestures plus the full keyboard shortcut map (? or the top-bar help icon opens it).

Product Tour

Full-screen overlay

All personas

- Persona-aware, spotlight-and-card first-run coach mark sequence (4–5 steps); replayable anytime from Settings.

Plain Mode

Alternate full-app render

All personas

A complete accessibility fallback — replaces the entire spatial/gesture UI with one scrollable page of flat sections and plain buttons, reading and writing the exact same store.

- Sections: The Now (dismiss/act), People (status pills), Leave balances + Requests (inline approve/decline), Payroll (masked + approve correction), Documents (acknowledge). No drag, no peel, no animation.

02

Common / reusable components

Two tiers: components the original app *already* built as one shared module, and repeated inline patterns its own component-research surfaced as candidates that should be extracted but currently aren't. Both are worth building as first-class shared components in a rebuild.

See it, don't just read it: every component below is also collected in a companion [Component Gallery](#) — real screenshots captured from the running app, laid out card-

by-card with purpose, states, and props.

Already centralized in the source

COMPONENT	PURPOSE	USED IN
Token Card <code>Tokens.tsx</code>	The core draggable, three-layer data card — face (always visible), Layer 1 expand (long-hover/tap), Layer 2 deep peel (top-right corner). Every record in the app is one of these.	People, leave requests, payslips, company KPIs, cues for onboarding, resource levers, resource cards
Corner grammar	4 hover-revealed handle buttons baked into Token Card: top-left grip (the only drag initiator) · bottom-left stack (multi-select) · top-right peel (toggle Layer 2) · bottom-right close (hide, restorable from the add menu).	Every token-related button: TL/TR/BL/BR. Reused on the Board and Board (move/res)
Avatar	Seeded circular profile photo with graceful degradation to a colour + initial on load failure.	Every person in the app-wide
Masked	Obscures a sensitive value (pay, phone) behind bullet characters with an inline reveal toggle.	Payslips, reimbursement register
Concept Icon + registry	Single source of truth binding one Lucide glyph + one semantic tint to each of ~46 named concepts (person, leave, payslip, document, Policy, growth, risk, wellness...). Documented in-file as the app's most portable extension point.	Everywhere it appears
Q Orb	Animated glowing orb — Q's visual presence and mood indicator.	Docked in the top right, opens the
The Cue	Bottom-center persistent command bar — type or speak to Q; the app's single drag-to-Q drop target.	Mounted at the bottom of the screen

COMPONENT	PURPOSE	USED IN
Q Panel	Slide-in chat sidebar — full conversation log with rich response rendering.	Global, to orb
Rationale Disclosure	Collapsible "Why this?" AI-explainability block: why / why-now / worth noting / evidence list / confidence.	Q Panel m task cards
Group Panel (Stack Tray)	Floating tray for multi-selected tokens — combine into a comparison, or ask Q about the whole set.	Global, ap selection
Contextual Add ("+")	Floating add menu whose contents change with persona × region × home-view — the most context-sensitive component in the app.	Global, bc
Modal shell	Shared dialog chrome: scrim, glass card, icon+title+close header, scrollable body.	Every ove Add Persc Team Mat Viewer)
Toasts	Top-center, auto-dismiss (3.2s) notification stack.	Global — c sites
Gesture Legend / Product Tour	On-demand cheat sheet and first-run coach overlay for the interaction grammar.	Global
Clock Widget	Attendance clock — circular progress ring vs. an 8h goal, clock-in/out/break controls; also exports a <code>PeriodBar</code> for the pay-period peel layer.	Employeee (bare moc

COMPONENT	PURPOSE	USED IN
Pulse Layer	Global renderer for every gesture-feedback pulse (soft flash + two rings + particle burst) at the exact interaction point.	Every con reject / pe
Wallpaper + Fluid Field	Ambient animated background — pure inline SVG/CSS, no canvas. 5 selectable wallpapers (aurora, waves, rain, dawn, ember) plus a permanent fluid gradient layer with a turbulence/displacement filter.	Global ba
Sound + haptics	Procedural Web Audio effects (pickup/hover/merge/relate/confirm/reject/close/peel/droplet), each paired 1:1 with a 3-tier vibration.	Every ges
Drop-zone registry	Framework-free registry (<code>registerZone/hit/qProximity</code>) — the shared drag-target infrastructure every draggable card relies on for hit-testing and Q-bar proximity.	Tokens, W Board, sid
Synthesized (result card)	The "combine/relate" output card — built on Token Card, with a gradient "provenance seam" blending its two parents' tint colours.	Spawned to-combin
Chart primitives (<code>Viz.tsx</code>)	10 hand-rolled, no-library visualizations: grouped bars, mini progress lists, an SVG line/area trend, a stacked band bar, a CSS-grid heatmap, an SVG radial gauge, a 2×2 talent map, a second heatmap variant, and two personal (hours/pay) bar charts.	Q respons Planning- Focus, sel

Patterns to extract (repeated inline, not yet centralized)

The app's own component research flags these as verbatim-repeated structures across otherwise-unrelated pages — strong signal they should become real shared components in a rebuild rather than being hand-copied again.

PATTERN	SEEN IN	RECOMMENDED PRIMITIVE
Colored-dot count pill	Roster, Time & Holidays, Focus, Payroll register	<code><StatPill icon color label count></code>
Segmented tab / filter chip	Planning, Growth, Team Growth, Payroll (Register/Reconcile), Documents categories	<code><SegmentedTabs></code> / <code><FilterChip></code>
Checklist row (checkbox + strikethrough + owner tag)	Offboarding exit tasks, Growth/Team Growth 1:1 action items	<code><ChecklistRow done label owner onToggle></code>
Spring-animated progress bar	Offboarding, Growth, Team Growth, Planning band bars, chart mini-bars	<code><ProgressBar value tone></code>
Status-tinted badge	Team Docs (draft/published/archived), reviews, reimbursement claims	<code><StatusBadge status meta></code>
Kind → {label, icon, color} lookup table	Re-implemented 6+ times (owner tint, reason tint, leave-kind meta, priority meta, journey icon/colour...)	One typed <code>createKindMeta()</code> helper/convention
Left-accent-bar priority card	Focus task cards, Payroll anomaly cards	<code><PriorityCard accent icon title detail></code>
Numbered-circle stage rail	Payroll run tracker (Calculated → Anomaly → Approval → Release)	<code><StageTracker steps current></code>
Client-side text/CSV download	Payslip download, asset register, payroll CSV export — 3 near-identical Blob implementations	<code>downloadTextFile(name, body)</code> utility
Dual-dot range visualization	Compensation band position (current vs. projected salary)	<code><RangeTrack min max markers[]></code>

PATTERN	SEEN IN	RECOMMENDED PRIMITIVE
Swipe-right-to-dismiss card	Focus queue only, currently	<code><SwipeCard onSwipeRight></code>
